

Bose-Einstein Condensate is proof space is merely a phase aspect of this Schrödinger frequency universe

Bose-Einstein Condensate is proof that [Dr. Milo Wolff](#) is right and we are in this frequency universe predicted by Schrödinger.

Dr. Milo Wolff has proven the electron is a scalar, standing wave and that this is Schrödinger's frequency universe.

In addition, I've shown that space is merely a phase aspect of this Schrödinger frequency universe.

By cooling and producing the Bose-Einstein Condensate, you are removing the energy from these standing wave entities so that they actually merge into a single entity.

From Scientific American March 1998 issue:

"Expanding on Bose's work, Einstein showed that if a sample of atoms were cooled sufficiently, a large fraction of them would settle into the single lowest possible energy state in the container. In mathematical terms, their individual wave equations--which describe such physical characteristics of an atom as its position and velocity--would in effect merge, and each atom would become indistinguishable from any other."

This does not prove quantum theory wrong -- quantum theory still survives within certain parameters -- but this does indeed prove Dr. Milo Wolff right: We definitely are in a standing wave universe where space is created by out of phase *spin/precessional/orbital* frequencies. And space is **removed** where these *spin/precessional/orbital* frequencies -- by cooling -- become more in phase with each other.
