Yes. Your overall picture describes well the behavior of charge-related scalar waves in the universe, that contribute to each other and form the inward waves that indeed move or rotate 720 degrees when reversing direction to produce the spin of each electron or positron or proton.

There is no need to term it a waves guide. In fact it is little misleading, especially since a wave guide is an electromagnetic device on a macro scale. Such e-m waves are not real but are the appearance of millions of real scalar wave energy transfers.

In contrast, the real scalar quantum waves are on the micro quantum scale. One by one they are the structure of a single electron but contain the waves of all other electrons..

Your recognition of this is VERY IMPORTANT to understand the structure of the universe. I guess you realize that the inter-connected wave behavior means that each electron or proton, or neutron is also part of all the rest and vice-versa. The entire universe is an interconnected system of quantum waves. In a sense, the waves of each particle is a hologram of the rest of the universe. It is awesome and breath-taking to think of this immense fact and to realize how few people know it.

Most people imagine that we, on Earth with the Solar system, are a self sufficient system. The stars and galaxies we regard as 'decorations in the sky'. We could exist just fine without them. No!! This naive concept is absolutely impossible! The fact is that all the physical laws, all the matter of Earth are totally dependent on the existence of the millions of billions of other stars. We are ONE with the universe but most people don't hardly have a clue to guide their thoughts of it.

It is impossible to even imagine our existence without the rest of the universe. We, Earthlings are totally deluded by our self-centered concern with our Earthly affairs that blind us to the reality of interconnection of the whole universe.

Fitz, please tell me your reaction to this statement. Thanks.

Milo Wolff
