

A bit of light about

# our SPACETIME concept.

Space and time are irrevocably linked together into the single quantity of spacetime.

When you look through a telescope into space then you are also looking back into time. This indicates the **spacetime** concept

Spacetime is also the essence of both special and general relativity in which we see space cannot be separated from time, however we unsophisticated humans have been witnessing space separate from time for thousands of years, but why is this so?

In this paper, I'll show you why we've been seeing space separate from time.

And I'll show it to you via mathematician Stephen Wolfram's method, by using a simple model instead of complicated

math.

Mathematician Stephen Wolfram proved and said in his best seller *A New Kind of Science*, that "Math can only explain simple things but a simple model can explain a complicated universe."

Stephen Wolfram was absolutely right: look at the following.

We have **SPIN** in all entities in both the microcosm and macrocosm.

You must also remember that the electrons in your eyes are spinning too. You must then think about all these galaxies and galactic clusters that are spinning around, not only you, but around the spinning electrons in your eyes as well.

So, there is a lot of **relative motion** between you and the rest of the universe, but even more **relative motion** between your spinning eye electrons and the rest of this universe.

The same amount of **relative motion** exists between your eye electrons and the rest of this universe whether those electrons spin in relation to the universe or the universe spins around them; the amount of **relative motion** is the same *in each case*: this is **one important fact** considering the **red shift** is being caused via **relative motion**.

Please consider carefully, the validity of the next sentence; if it is true then we have a problem with what the present

science establishment is telling us.

It's quite possible, considering the spin of those eye electrons, that this SPIN **relative motion**, *by itself*, explains 100% of the **red shift**; if this is so, then those precise measurements in space, by Saul Perlmutter and others, do **not** indicate we have a universe that is expanding faster with time: it's back again, after half a century of wrong beliefs, to Sir Fred Hoyle's steady-state universe.

Hubble, who discovered the **red shift** warned us **against** believing that this meant we had an expanding universe, and mathematician Stephen Wolfram taught all of us that only the correct model can give the correct answer.

SPACE is what you see if you completely ignore all of this **relative motion**.

TIME is given to us via all this **relative motion**.

Even though our ancestors have seemingly separated these two, they always exist together and simply cannot be separated.

**And that is a bit of light shed on both *SPACE* and *TIME*.**

There is a lot more to spacetime than this, but you will have to read a lot more to learn a lot more about spacetime.

**And perhaps this also spreads a bit of light about how the**

present science establishment should be viewing all this  
**SPIN relative motion.**
